

-2-

AMENDMENT TO THE CLAIMS

1. (previously presented) A plant stake assembly comprising:
  - a plant information label provided with a hole and print on at least on surface;
  - a plant stake for holding the plant information label, the plant stake comprising:
    - a first abutment surface on a first side;
    - a second abutment surface on a second side;
    - wherein at least one of the first abutment surface is formed in a notch; and
    - wherein the notch provides room for rotation of the plant information label; and
    - wherein the label abuts the first and second abutment surfaces.
2. (previously presented) The plant stake assembly according to claim 1, in which the abutment surface in the notch is situated above the abutment surface on the other side of the plant stake.
- 4.3. (previously presented) The plant stake assembly according to claim 1, wherein the plant stake is further provided with at least one stop surface, separate from the abutment surfaces, on the first side or the second side for limiting rotation of the information label.
- 6.4. (previously presented) The plant stake assembly according to claim 3, further comprising two stop surfaces that are substantially vertically situated above each other.
- 9.8. (previously presented) The plant stake assembly according to claim 1, in which the ratio between the dimensions of the hole and the length and the width of the plant stake is such that the plant information label can be arranged on the stake.
